Question: 1

Which combination of SAP BTP role collections allows a user to manage queues and topic subscriptions in SAP Event Mesh, and monitor its usage and resources?

- A. ApplicationAdmin and ApplicationDevelop
- B. EventMeshAdmin and EventMeshDevelop
- C. SecurityAdmin and SecurityDevelop
- D. IntegrationAdmin and IntegrationDevelop

Answer: B

Explanation:

Based on official documentation from learning.sap.com, the correct combination of SAP BTP role collections that allows a user to manage queues and topic subscriptions in SAP Event Mesh, as well as monitor its usage and resources, is:

- Enterprise Messaging Administrator
- Enterprise Messaging Developer

These correspond to answer choice B: EventMeshAdmin and EventMeshDevelop. Here's the evidence from SAP's guidance:

From a lesson covering the "Setting Up SAP Cell and Gene Therapy Orchestration Event Mesh," it shows the Event Mesh role collections available and states:

"four roles: Enterprise Messaging Administrator, Enterprise Messaging Developer, Enterprise Messaging Display, and Enterprise Messaging Subscription Administrator" learning.sap.com+1learning.sap.com.

The image indicates these are the relevant Event Mesh-specific roles for managing and using the service. Of these, the Administrator role typically enables management of queues and subscriptions, while the Developer role often includes access to messaging capabilities and possibly monitoring aspects. The other listed roles—Display or Subscription Administrator—are more limited (view-only or

subscription-focused).

Thus the correct combination is B. EventMeshAdmin and EventMeshDevelop.

Question: 2

Which SAP offering provides a highly scalable, distributed event streaming platform that supports MQTT, AMQP, and JMS protocols for efficient and secure event transmission in hybrid IT landscapes?

- A. SAP Business Technology Platform (SAP BTP)
- B. SAP Cloud Platform, Integration
- C. SAP Process Orchestration
- D. SAP Integration Suite, Advanced Event Mesh

Answer: D

Explanation:

According to learning.sap.com, the offering that provides a highly scalable, distributed event streaming platform—supporting protocols like MQTT, AMQP, and JMS—for efficient and secure event transmission in hybrid IT landscapes is SAP Integration Suite, Advanced Event Mesh. This fully managed platform enables event streaming, management, and monitoring across cloud, on-premises, and edge environments learning.sap.com.

Hence, the correct answer is:

- D . SAP Integration Suite, Advanced Event Mesh

Question: 3

Which SAP offering manages integrations across hybrid and multicloud environments?

- A. SAP Cloud Platform Integration manages integrations across hybrid and multicloud environments.
- B. SAP process Orchestration manages integrations across hybrid and multicloud environments.
- C. SAP Integration Suite manages integrations across hybrid and multicloud environments.
- D. SAP Business Technology Platform manages integrations across hybrid and multicloud environments.

Answer: C

Explanation:

Based solely on the information from learning.sap.com, the correct answer is:

C . SAP Integration Suite manages integrations across hybrid and multicloud environments.

Here's the supporting evidence:

- SAP Integration Suite is positioned as the integration platform that simplifies and accelerates integration across SAP, partner, and third-party systems. It supports cloud, on-premise, and hybrid landscapes, enabling "integration across hybrid, multi-cloud, and edge environments"
learning.sap.com+10learning.sap.com+10learning.sap.com+10learning.sap.com+2learning.sap.com+2.
- Its Cloud Integration capability explicitly enables the design and execution of integration flows across cloud-based and on-premise systems in hybrid environments learning.sap.com+1.

The other options (SAP Cloud Platform Integration, SAP Process Orchestration, SAP Business Technology Platform as a whole) are either outdated names or broader platform terms—not the specific offering tailored to hybrid and multicloud integration as described on learning.sap.com.

Therefore, the correct choice is C.

Question: 4

You call the following URL in your browser:

[https://sapes5.sapdevcenter.com/sap/opu/odata/iwbep/GWSAMPLE_BASIC/ProductSet\('HT-1000'\)/ToSalesOrderLineItems](https://sapes5.sapdevcenter.com/sap/opu/odata/iwbep/GWSAMPLE_BASIC/ProductSet('HT-1000')/ToSalesOrderLineItems). What file type is displayed?

- A. Java
- B. PHP
- C. HTML
- D. XML

Answer: D

Explanation:

I wasn't able to access the URL directly for verification, but based on documentation and exam discussions on learning.sap.com-style content, the correct answer is:

D . XML

Here's what supports that:

- A widely referenced exam discussion (mirroring learning.sap.com content) indicates that calling the provided URL displays an XML response, with XML being the "Most Voted" correct answer:
- Additional sources of such questions (aligned with SAP's official course materials) also list XML as the answer:

So, the correct answer is D. XML.

Question: 5

You have created a product based on an API proxy, but you have not published the product yet. What is a consequence?

- A. The product is displayed in the API Business Hub Enterprise but is grayed out.
- B. The product is displayed in the API Business Hub Enterprise with the note "not published".
- C. The product is not displayed in the API Business Hub Enterprise.

Answer: C

Explanation:

I wasn't able to find a direct statement on learning.sap.com regarding what happens when a product is created but not published in API Business Hub Enterprise. However, the site's guidance on how products are displayed provides a strong implication:

- In the "Creating a Product" lesson, it notes that only published products appear on the API Business Hub Enterprise portal as tiles. If you haven't published a product yet, it simply doesn't show up there learning.sap.com.

Based on that, the correct answer—as implied by learning.sap.com—is:

- C . The product is not displayed in the API Business Hub Enterprise.
