Question: 1

Where do you enable opportunistic cross-docking in a decentralized EWM?

- A. In the warehouse and the document type
- B. In the product and the warehouse process type
- C. In the warehouse and the product
- D. In the product and the document type

Answer: C

Explanation:

Question: 2

Using embedded EWM, what options do you have for the goods receipt posting for external procurement? Note: There are 2 correct answers to this question.

- A. Use synchronous goods receipt where you post the GR in ERP.
- B. Use the ERP Inbound Delivery to post goods receipt.
- C. Use the EWM Inbound Delivery to post goods receipt.
- D. Use synchronous goods receipt where you post the GR in EWM.

Answer: B, D

Explanation:

Question: 3

What information is used to determine the availability group? Note: There are 3 correct answers to this

<https://www.examsnest.com>

question.

- A. Storage location
- B. Stock type role
- C. Non-location-dependent stock type
- D. Plant
- E. Warehouse number

Answer: A, D, E

Explanation:

Comprehensive and Detailed In-Depth Explanation:

The availability group in SAP EWM defines how stock is grouped for availability checks and is critical for inventory management integration with SAP S/4HANA. It is determined by the plant, storage location, and warehouse number. Option A ("Storage location") is correct because it specifies the physical or logical location within a plant, influencing stock availability. Option D ("Plant") is correct as it's the organizational unit tying inventory to a specific facility. Option E ("Warehouse number") is correct because it links the availability group to a specific EWM-managed warehouse. Stock type role (B) and non-location-dependent stock type (C) influence stock categorization but are not directly used to define the availability group; they are subordinate to the plant/storage location/warehouse structure. This configuration is maintained in SPRO: SCM Extended Warehouse Management > Goods Receipt Process > Configure Availability Group.
